Subject: Regarding Gilbert Expansion Plan: Why Bow Down to California NIMBY'S

RECEIVED

2001 FEB 27 A 9:46

Dear Commissioner Spitzer:

I live in the Finley Farms South area of Gilbert -- virtually ground zero in the fight against expanding the power plant. I have had people come to my door and ask me to sign petitions. I have signed the petitions. However, I was not really outraged about the plans of SRP -- until now. What made the difference?

AZ CORP COMMISSION
DOCUMENT CONTROL

The expansion plan is to add 825 megawatts of power -- 500 megawatts, or 60%, is to be SOLD TO CALIFORNIA!

As I said, there was no previous outrage on my part because if we need the power, we need the power. But this is a profit center for the power companies involved and a reward to the NIMBY's and radical environmentalists in California.

Tempe understood this and wouldn't allow themselves to bend over to Californian's who refuse to yield to common sense -- if you want power, you've got to build power plants. (I don't deny it's smart business to sell California power -- but sell it from plants built in the desert, not in a residential area.)

Bottom line: several hundred homeowners in Gilbert are paying the price for 1/2 million California residents. Where is our compensation? As the power companies profit, shouldn't we? How about a quarterly "royalty" check on all power sold to California? I'd even consider one large up front payment...what do you think?

Sincerely,

Jim Estrada

ATTENTION: William Mundell, Chairman

Dear Sir:

I would like to express my feelings regarding the proposed expansion of the SRP San Tan Power Plant in Gilbert.

As a native of Arizona I recognize the necessity of an adequate power supply for our state. The unbelievable growth of the East Valley makes this plant not an option but a necessity in my opinion. The area residents who are complaining about this expansion, I can assure you, will be the first to complain if they have to do without power even for a few hours. They also will be the first to complain if our Electric Supply runs so short that we have to try to make more purchases from other areas, and their electric rates go sky high. I for one feel that each of these people who live in the area realized the power plant was there and in operation when they purchased their property and should have recognized the growth would require more electricity.

Please I would like to encourage you to recognize the needs in the East Valley and vote to let SRP complete the proposed expansion.

Thank you for considering this letter.

Sincerely,

A handwritten signature in cursive script that reads "Opal E. Pratt".

Sham on all of you!!!!!! The Arizona Corporation Commission is going to turn Gilbert into a very ugly place to live. It won't matter how far away you live in Gilbert the smoke stacks will be visible and the pollution will effect us all. Spending a nice day at Freestone Park inhaling all of the fresh clean air LOL. How can you justify Poisoning my children. I live within two miles of SRP Power Plant. 150 ft smoke stacks!!!! Are you Crazy!!!! I'm not only worried about the value of my home but the value of human life. There are many other places SRP can expand. SRP is expending to make a huge profit by selling power out of state, NOT BECAUSE WE IN THE VALLEY NEED IT!! My quality of life is going to sacrificed so they can put money in their wallets. I have no faith in our government system anymore. How can you allow this to happen???????? Look into the faces of my children and tell them why you gave the OK to poison them. JOSHUA 11yrs old , JOSEPH 4yrs old, NAOMI 1yrs old.

Thank you,
Joseph & Valerie Edwards

it is insane for you to allow SRP to expand the santan power plant in Gilbert. The pollution and shit they will dump in the ALREADY bad air is unexuseable!!! The STATE keeps calling to see if I car pool and such BUT LIKES SRP KILL US ALL> I wonder who got paid off on this one? YOU?

With 9- 10 SRP plants going up out side of Phx why is santan so important? have you asked them that yet? with that many plants in this state why are the saying we will have the same problems as Cali? Are the other plants for us or fro sell to ohters!!@!!!!!!

To Whom It May Concern:

I am writing to you regarding my concern about the East Valley's energy future. Through newspapers, magazines and television, I am aware of the energy crisis that has plagued California for the past nine month.

I believe the Santan project is absolutely vital to providing a reliable supply of electricity to the East Valley. Here's why:

- SRP's electric supplies were nearly maxed out last summer.
- There is no more room on the high voltage transmission system to bring in more electricity from areas outside of the Valley.
- The entire West is short of electricity and California will soak up every spare kilowatt for several years to come.
- Competing with California on the open market means paying three or four times as much for electricity as we do today.
- Finally, Santan provides local generation, crucial for maintaining proper voltage and a reliable delivery system.

Thank you for your time.

Sincerely,

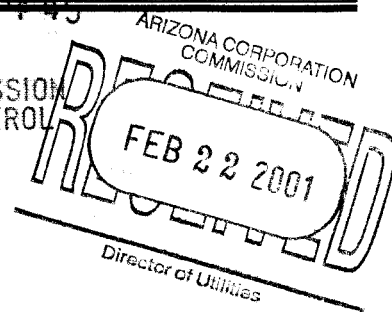

E. Leslie Pospisil, D.D.S.

Phoenix, Arizona 85007

Re: **Proposed S.R.P. San Tan Power plant Expansion
At Val Vista and Warner Rd., Gilbert, AZ**

Dear Mr. Maguire:

We are residents and homeowners in Gilbert, Arizona. We speak on behalf of our family, as well as those fellow residents who also oppose this intrusion into our neighborhood, but who may not write to you. **We strongly oppose the proposed expansion of the S.R.P. San Tan Power plant located at Val Vista and Warner Rd., Gilbert, Arizona,** for the following reasons:

The existing SRP facility was built over 25 years ago when there was little, if any, development in the area; now, over 25 years later, the town of Gilbert has grown into a heavily populated residential area, growing rapidly. **An industrial facility of the size and nature proposed by SRP has no business being located in a heavily populated residential area such as Gilbert.** Nowhere else in the nation is there a facility of the size and nature of what SRP now proposes located in such a similarly heavily populated residential area. Please do not allow SRP to expand their San Tan facility in Gilbert!

Further, our "Valley of the Sun" is already struggling to meet E.P.A. air quality standards, and has had to have an extension of time to be able to meet the standards. Why add to the already existing air problems by locating in Gilbert? Have you seen the pollution carrying clouds of steam rising continuously from the existing plant? We have, and we don't want double or triple that in our backyard! Our children have to breathe this air!

Nor is there any good reason why the plant has to be expanded at this location: there are other sites available for this power plant which are not in close proximity to so much population. Please do not allow SRP to expand their San Tan facility in Gilbert!

SRP has not even conducted any government controlled environmental impact study on the facility they propose! SRP does not truly know what the impact will be of operating this proposed expanded facility in close proximity to so much residential population. A medical doctor who has reviewed the levels of emissions contemplated by the proposed expanded facility was shocked that allowing this to take place was even a possibility! Please do not allow SRP to expand their San Tan facility in Gilbert!

And why should SRP be allowed to build a pollution generating facility in this Gilbert residential area, when the bulk of the power will be transported to, and consumed by, users nowhere near Gilbert? If you allow this plant to be built, other users, far away, get the power, SRP gets the profit, and us residents of Gilbert get the pollution. How is that right? It's not! Please do not allow SRP to expand their San Tan facility in Gilbert!

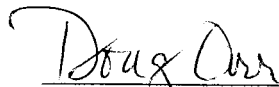

And don't be misled by SRP's recently raised claims of the need to generate power close to the point of consumption: if power transmission was such a problem, how could the "Four Corners" coal-fired generating facility, the Hoover Dam hydro facility, or the Palo Verde nuclear facility have operated so successfully all these years? Power from these facilities is transported literally hundreds of miles, with no problem. Yet, now that it wants to expand in Gilbert, SRP claims it would be a problem to build in Coolidge, Arizona, and transport power 30 miles into the valley! That argument defies logic! Don't be misled by SRP's false arguments!

Contrary to the recent media blitz of "power shortages", we have no power shortage in Arizona, nor are we likely to anytime in the near future: Arizona consumes only 5,002 megawatts of the 15,000 megawatts presently produced by SRP; the rest is sold outside our borders, and 10 more power generating facilities have already been approved to be built in the coming several years. Our needs now, and in the future, will be met without expanding the San Tan generating facility in Gilbert.

As a homeowner, we are concerned about lower property values if the expansion is approved. Who will want to buy a home near an industrial facility? WE wouldn't, nor would you! The generating facilities at Palo Verde, Four Corners, and Hoover Dam do not impact residential land values because they are nowhere near residential development. But there is a very real, very negative, financial impact to this expansion. Please do not allow SRP to expand their San Tan facility in Gilbert!

For all these reasons, **we strongly oppose the proposed expansion of the S.R.P. San Tan Power plant located at Val Vista and Warner Rd., Gilbert, Arizona**

Sincerely,

Doug Orr

ORIGINAL

Dear Arizona Corporation Commission,
My family moved to Gilbert in 1999 to get away from all of the overcrowded, congested communities and roadways. We liked Gilbert's agricultural small-town atmosphere, and found a house plan and lot size to give our kids room to play. Since moving here, I have been very busy getting involved in my community and trying to keep the values in my community that we moved here for. I have become the Secretary for Greenfield Lakes Homeowner's Association, attended Town Council meetings, spoken with council members and city planners, and was involved with the HOA Task Force Committee, Open Spaces and Trails Plan Committee, and the Growing Smarter Task Force Committee. These committees were supposed to give the citizens a say in how Gilbert would be developed. I had been happy with the outcome of all of these meetings, and felt Gilbert's leaders truly cared about their residents. I am terribly disappointed, however, to see how little was or is being done to protect my Greenfield Lakes development, as well as the other Gilbert communities directly surrounding the future speculated site of SRP's San Tan Plant. Council members state they want to retain the "hometown" feeling in Gilbert. To me, a "hometown" feeling would be maintained much more easily if we were viewing 150-foot grain silos to remember Gilbert's agricultural history rather than 150 foot smokestacks polluting the air. Gilbert now requires all new housing developments to have HOA's. This is to supposedly protect house values by keeping the neighborhoods well maintained and looking nice. It is a joke this San Tan plant will be placed right next door to these communities. Do they truly believe trees will cover these smokestacks? Maybe some California Redwoods 50 years from now! What are council members thinking?
I am also very disappointed with SRP's lack of concern with their customer's well being. When we first moved into our home, SRP personnel came around to inform us that they wanted to expand their existing plant to generate more power for the East Valley and clean up the pollution. When asked if we were in favor of cleaner air for our families to breathe, what were we expected to say? And who would say we are hoping to have brown outs of blackouts in the peak summer months because of the growth of the valley? SRP seems to be willing to jeopardize our lives and town so they can sell the power for their own gain. They are threatening our lives by using ammonium sulfide, a byproduct of the technology the San Tan Plant will use to cut down other harmful emissions. Plenty of people are allergic to sulfides, and they have been proven to shorten lives. (Steve Brittle, head of Don't Waste Arizona in Phoenix New Times, Feb.22, 2001) They are also threatening our lives by building the plant without a containment building, which would lessen the impact of an explosion. What kind of "good neighbor" would purposely put their next door neighbors in great danger? For an extra \$2 million, which should be easy for SRP to come up with, they could greatly improve the safety of their neighbors in case of an explosion. The San Tan Plant will sit 250 feet away from a recently built subdivision of middle class homes. This plant will cause our house values to decrease by 15-20%. A loss my family certainly cannot afford.

This plant is the only one of its size in the country being proposed in an urban area. If Arizona were in danger of running out of power, why is

SRP negotiating deals with New Mexico and California to sell them some of the power they will be generating at these new plants? In actuality, our *good neighbor*, SRP, would be a private and public nuisance with their factory smoke.

Let's do some basic math:

According to Mark Kwiat of C.O.S.T. (Citizens Opposed to San Tan), 1 megawatt of electricity will supply electricity for 700 homes. Gilbert's growth is expected to peak at 325,000. Subtract the current population of 108,000 and you have growth of 217,000 people. 310 megawatts is what would be needed to supply the additional homes. Why then do we need the 825 new megawatts proposed with the San Tan?

We live in a DESERT! If all proposed new plants get approved the Arizona Corporation Commission, they will consume approximately enough water to supply a city of 1 million people! (New Times, 2-22-01) We are told to xeriscape and do everything we can to conserve water, but we are willing to jeopardize our limited water supply for SRP's gain? Let's THINK about this.

I am not opposed to adding more power to the valley. My concern is pollution, explosions, use of our limited water supply, and our property values. SRP has other location alternatives that would not have as much of a detrimental impact on its immediate surrounding community. I just want them to build the plant elsewhere. It will cost them more, but they can afford it, and it would be worth it for the entire Town of Gilbert's sake. Granted SRP was here before our housing developments, but to be fair to these new communities, no mention of SRP's expansion, especially building 150 foot smokestacks, was made in the disclosure packages upon purchasing our houses. When SRP was first allowed to build the San Tan plant 20 years ago, there was nothing but bare acreage and farmland in Gilbert. I would like to see the San Tan facility either halted or have its size seriously limited. Let's not purposely add to our pollution problem. All the growth, cars, new freeways, and expansion will be enough of a test on our delicate environment.

Sincerely,

Dawn Tunny

RECEIVED

2001 FEB 27 A 9:46

This letter is about the vote concerning the expansion of the San Tan plant in Gilbert.

When my wife and I moved into this house at the end of 1998, we were aware of the plant being less than half a mile from our property. We were never told of an expansion in the works. If we knew this was a possibility, we would never have purchased here.

AZ CORP COMMISSION
DOCUMENT CONTROL

My concern is the years of work to save enough money to buy this house may have been wasted if we ever need to move. SRP says the plant will have no effect on my home's value. Common sense says 150 foot stacks are going to be a concern to any potential home buyer and will have a negative impact on their offer. I may lose a good portion of the equity I have worked to build. We didn't have plans to move. We had hoped this would be the house we would raise our two children in. The decision by the Line Siting Committee has caused us to rethink our plans.

I realize you probably have received a number of letters concerning this issue. I hope my concerns and those of my neighbors will have some impact on your final decision.

If you decide this plant needs to be expanded, I hope you do reconsider one issue not passed in the Line Siting Committee's approval; that of the need for SRP to set up a fund to compensate residents if the plant's presence does drive down property values.

Thank you for your time and I hope this and all the concerns voiced by people in Gilbert cause you to do something you have never done, overturn a recommendation by the Line Siting Committee.

Sincerely,

Michael Miller

William Mundell, Chairman
ARIZONA CORPORATION COMMISSION
Utilities Division
1200 W. Washington
Phoenix, AZ 85007

RE: Docket Number L-0000B-00-0105

Dear Commissioner Mundell:

During the next several weeks, you and your fellow commissioners will be deciding whether or not to approve the Line Siting Committee recommendation to grant SRP's application for a Certificate of Environmental Compatibility for the above-referenced expansion of their Santan Plant. I attended many of the hearings and based on the information presented by SRP, it is inconceivable that the committee could sincerely believe SRP has shown this plant expansion to be environmentally compatible. SRP's presentation didn't even substantiate the need for more power, particularly when one considers there are approximately 16 new power plants in the works already. It was readily apparent that the committee's decision had been predetermined by something other than the actual evidence presented at the hearings.

There are other more environmentally sound alternatives to expanding this plant, including running additional transmission lines (something SRP plans to do anyway). It is unconscionable, not to mention incredibly shortsighted, to permit this environmental disaster in the middle of a densely populated residential neighborhood, particularly when other viable alternatives exist. While environmental issues may need to be balanced with the need for additional power, it is NEVER acceptable to DELIBERATELY POISON people, as this 1,125 megawatt power plant will! Essentially, this constitutes legalized robbery, stealing the health of residents, and potentially shortening their life span by years. No one has that right, for any reason.

William Mundell
February 19, 2001
Page 2 of 5

The Line Siting Committee did not require SRP to comply with the interveners request that a condition be imposed requiring SRP to setup a fund to cover potential loss in property values. Apparently, the Committee bought SRP's defense that this would set bad public policy, and that next people would want to be reimbursed for damages caused by other pollution sources, such as freeways. This is a pretty amusing statement coming from SRP, considering they insist that there will not be any negative impact to property values as a result of this plant expansion. In any event, there is really no comparison here. A freeway, by virtue of the purpose for which it is constructed, must be located in a particular area. Conversely, a power plant can be located anywhere and achieve essentially the same goal. As a minimum, SRP should certainly be held financially liable for any and all damages resulting from their ill-conceived site choice. The failure of the Line Siting Committee to diligently pursue this issue is only further evidence that the proceedings were a sham. Considering the amount of time and money private citizens have invested in opposition to this plant, one would at least hope for a fair hearing. The burden of proof seems to have been shifted from SRP to the citizens opposing this plant. Unfortunately, not only do we not have the endless financial resources that SRP does, representation on our behalf by the Town of Gilbert has been noticeably absent, with the lone exception of Mike Evans.

SRP has eluded to some sort of inherent right to add-on because they were here first. In actuality, some of us were here before them. My home was constructed in 1974, a year before the Santan Plant came online. The Santan Plant was never intended to be a base load plant, and this is probably why the Town of Gilbert allowed developers to build homes in the immediate vicinity. Up until very recently, this 300 megawatt facility was running less than 20% of the time, supplying back up generation only, as was intended. Now SRP wants to expand this to 1,125 megawatts, and run it 24/7. Under these circumstances, I would not have bought my house here - there are many other choices in Gilbert and if this plant goes forward, common sense

William Mundell
February 19, 2001
Page 3 of 5

dictates any potential buyer with half a brain won't be looking in this area.

I was quite confident up until the Line Siting Committee's decision that good judgement and morality would prevail. Obviously I was wrong, and I am becoming increasingly concerned that sanity has fallen by the wayside. I am alarmed by the concern you voiced several weeks ago regarding the power shortage in California and the potential requirement that Arizona provide power to that state. While that possibility exists (albeit miniscule), it would be short term, and consequently irrelevant to this issue. The State of Arizona currently generates twice as much power as we use, with a ton more already on the way. You also expressed concern that Arizona residents might be relegated to some sort of forced conservation program as a result. That such a concept is worrisome is a sad commentary on us! Whether we like it or not, at some point in time we will need to act responsibly and conserve our natural resources. Geologists estimate that at the current rate of consumption, North America will exhaust its supply of natural gas (the fuel for all these new power plants) within 66 years. Couple that with an anticipated increase in usage of 50%, and it's very apparent WE DO NOT HAVE AN ENDLESS SUPPLY OF ENERGY!

There is also a valid concern regarding the water supply. SRP states that water will be delivered through their canals. Unfortunately, canals undergo dry up for one month each year, and during this one month period, SRP will be tapping into Gilbert's ground water supply at the rate of approximately 5,320,000 to 8,352,000 gallons per day. Additionally, the excess CAP water SRP claims will be available to supply their plant most likely will not exist once all the other power plants planned for Arizona come online. In this case, they will be using Gilbert ground water, seriously threatening the integrity of our water table. Apparently, SRP can do this unchecked because of water rights granted to them under their municipality status. It is this status that has apparently given them all sorts of rights, including immunity from the Town of Gilbert zoning requirements. At this point, one would even

William Mundell
February 19, 2001
Page 4 of 5

have to question how it is that they qualify for this status, which gives them a decidedly unfair advantage over any competitors, in a deregulated market which will no longer be subject to rates caps in 2004. Perhaps revoking this undeserved status would be a more appropriate action than granting a CEC.

SRP's expansion scheme (more accurately described as a scam), is nothing more than a ruse devised to make money for them at the expense of Gilbert residents. They have been able to dupe the vast majority of people through the use of dirty tricks and scare tactics as the means to an end. No consideration has been given to the fact that the Valley is dangerously polluted already (in fact, we have the dubious honor of being one of them most polluted areas in the entire United States). No consideration has been given to the amount of pollution the future Santan Freeway will add to East Valley air simply because it is a "future" event. Considering that SRP's entire case for establishing the need for more power rests entirely on "future" population growth expectations, it's pretty ludicrous that the issue of the Santan Freeway has been precluded as inadmissible. It is a "certain" future event, whereas increases in future electricity consumption are merely estimated projections, based on "probability", not fact. It is exactly this illogical lack of regard for the ramifications of our actions that has resulted in most of the problems we currently face, including our impending kilowatt crisis.

Please be the voice of reason that puts a stop to compounding the mistakes already made. The Line Siting Committee established that additional transmission lines (which SRP is going to do anyway), would eliminate the need for this plant expansion. While it might cost a little more, it is immoral to place a price tag upon the well-being of Gilbert residents.

It may appear that SRP has had a fairly easy fight up until now and putting the stamp of approval might seem the most expedient thing to do. They certainly are quite confident

William Mundell
February 19, 2001
Page 5 of 5

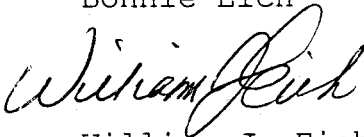

that you will back them up, as indicated by Scott Harelson of SRP. He stated he knows of no case in history where a power plant construction request was denied after the siting committee recommended approval. Then let this be the first! I know of no other case in history where a utility company had the audacity to attempt to construct an 1,125 megawatt in the center of a residential neighborhood! Most residents that actually understood the repercussions of this proposed expansion were incredulous that it was even being considered. They didn't seriously think that the Line Siting Committee would favor this plant expansion, and consequently did not bother to actively oppose it's approval. As this plant becomes closer to reality, what appears to be apathy will most likely be replaced with aggressive opposition.

As part of the immediate environment located directly south of the Santan plant, please be advised that this plant expansion is NOT ENVIRONMENTALLY COMPATIBLE WITH ME! As an environmentalist, it should not be environmentally compatible with you either. Please deny SRP's application, and send them a clear message that such disregard for the environment and the residents of Gilbert, will not be tolerated.

Sincerely,

Bonnie Eich

I am very concerned by this expansion because I live right next door to it in the Cottonwoods Crossing neighborhood. I assure you that this was not disclosed to me when I contracted to build my house. I am worried that my property value will drop dramatically and that the pollution will affect my family.

As my representative on the Corporation Commission I want you to vote against this expansion.

Kevin Turley

Dear Mr. Mundell,

I write to you as a citizen of Arizona. I live 1.5 miles from the Santan power station. I've lived in Arizona for 21 years now and I'm never surprised at the lack of political morality and the non-existence of business ethics in this state.

I'm not going to beg or pled to the ACC. I know it would be in vain since it seems almost every politically held office in this wonderful state of ours is corrupt or dangles from the strings of corporate Arizona.

The small group of "long time resident's", that controls the east valley and "SRP" and pretends to be Christian, knows nothing about real morals and ethics. They deliberately went out of their way to foist upon us (their prey) this incredibly negative influence. Even after, it was proven the SRP lied and misled everyone. After, it was proven it would be detrimental to the health and welfare of the surrounding citizens. After, the Governor of California said his state was going to become power self-sufficient and told the neighboring states to drop dead. These so-called "Christians" did everything in their power to get this plant approved.

We'll all I can say to every dirty, corrupt and immoral person involved with this expansion is, the day will come when we call all the shots and when it does (and it will) we may not be very forgiving of the past. Some of us have very long memories!

Finally, for those of you on the ACC who consider themselves real Christians remember! Somday God will judge all of you for your actions. I hope you all have a clear conscience and sleep well at night, (and I'm sure some of you will) after approving this plant expansion.

James Timpano (Your prey)

Dear Arizona Commission -

I'm writing to express my support for Salt River Project's plan to expand the SanTan power plant in Liberty. It's only wise to look into the future and see the ever-growing need for more power sources.

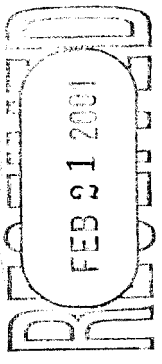

Please encourage this effort -

Thank you - Nancy Lewis Poorman.

I'm a Gilbert resident
Gilbert has already been
ruined by cookie cutter
housing and disappearing
ranches. I'm for the
Santan power plant
expansion.

ATTN: WILLIAM MUNDELL
Reference Docket #: L-0000B-00-0105

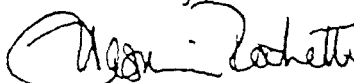

Dear Sir,

As a Gilbert resident of seven years, I am crushed to find the line siting committee voted to permit the expansion of SRP's Santan power plant. I moved here thinking it was a residential neighborhood and now realize that bodies such as yourselves, armed with the facts which show how detrimental this will be to our area, are blinded by whatever propaganda SRP has fed those that make these decisions.

Who is going to compensate for the loss of property values for those whose homes are either adjacent to the plant, or those who SRP's pollution falls upon?

I feel quite sure if any of the of the ACC board members lived here, the issue of SRP's proposed expansion would have been dead from the start. You know as ordinary people, we are powerless.

Sincerely,

Yasmin Rochette
